

Generator Building

PROBLEM

A wastewater company wanted to invest in stopping corrosion by protecting their generator building from the outside elements. Instead of allowing corrosion to continue they thought it was important to protect this asset.

SUBSTRATE

Metal

PRODUCTS USED

Resichem 506 Aluprime
Resichem 555 Resinox

SOLUTION

USI started the prep by water blasting the area. Then one coat of Resichem 506 Aluprime was applied on all of the existing rust spots that were left. Two coats of Resichem 555 Resinox were brush and rolled on. This will provide them with 15 years of corrosion protection from the outside elements.
