

## Project: Machine Base Concrete Resurface

### The Problem

This section of floor was used as the platform for several industrial pumps.

This platform had suffered from attack over the years by different chemicals, including hot mannitol.

The platform needed a complete rebuild to return it to a usable condition.

### The Solution

**USI Quartz Screed** resurfacing screed was chosen to rebuild the platform. **USI Quartz Screed** is a high-performance resurfacing screed which offers excellent long term protection to floors.

**USI Quartz Screed** can be applied to any concrete floor area. It has excellent impact and abrasion resistance, and offers good protection against a wide range of chemicals.

Prior to the machinery being put back into service, two coats of **USI Epoxy Coating** were applied to give added chemical protection.
