

THE HEART OF COATING SEASON IS FAST APPROACHING THE **USI** TEAM HAS YOU COVERED!

TYPICAL USES & APPLICATIONS FOR PIPE COATINGS:

- Liquid Coating of girth welds, field joints and tie-ins
- Liquid Coating of welds for boring applications
- Repairs to FBE, fittings and fabrication
- Bends, Valves and other odd shapes
- Rehabilitation of existing pipelines
- Slip Bore/Directional Piping
- Coating of cadweld areas
- Steel Sump Tanks
- Patch Material
- Internal Lining

Corrosion is one of the biggest issues to pipelines.

Uncontrolled corrosion of the pipe wall can lead to leaks, service interruptions or even explosions. Coating your pipes, whether it be internally or externally, is a great passive form of corrosion protection. By doing this, you are stopping corrosion before it starts which is a great way to reduce future costs and is very effective for lines that cannot be shut down. Coating pipelines is not only cost effective but is one of the safest ways to prevent corrosion in industries such as oil and gas.

USI offers several different pipeline coating options

for both internal and external applications and for different environments. We offer UV protection, underground protection and underwater protection just to name a few. All of our Coatings are easy to apply by brush, roller or spray. We also have options of Fast Cure, High Builds, Hot/Cold Weather applications, Abrasion/Corrosion resistant, 100% Solids and Safe/Environmentally responsible. The USI line of pipeline coatings, primers, tapes, wraps and protectants can be field applied. The USI Team can train your crew how to easily and effectively use any of our products on site. Our pipeline coatings, primers, tapes, wraps and protectants have great physical durability, thermal resistance and insulation properties. Tell the USI Team your specific needs, and our Coating Experts will recommend the coating(s) to best suit your needs and save on costly downtime.
