

SUCCESS STORY: Client Issue - Sand Filter Leaks

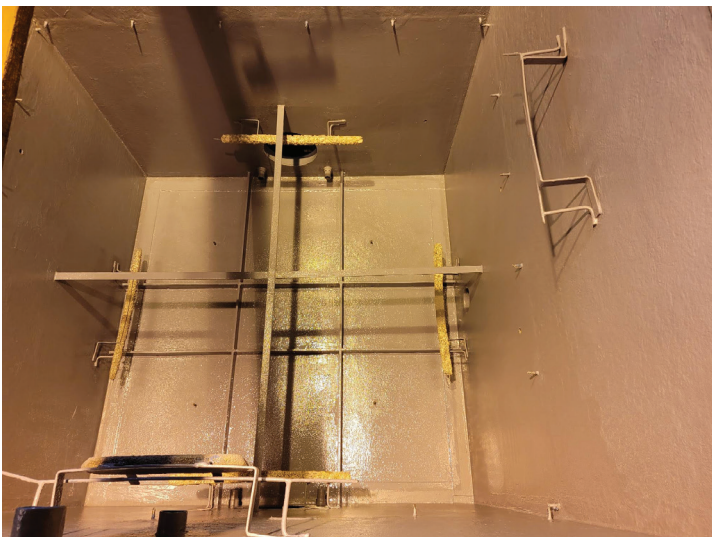

The steel mill was experiencing leaks in their sand filter and replacements costs were going to run into the millions of dollars when you consider removal of old sand filters, the price of new sand filters, and installation costs.

USI Group's Solution: This particular steel mill has Unconventional Solutions partner up with one of their on-site contractors to train and provide technical support and troubleshooting on how to use our **Resimac Resimetal 101 Metal Repair Paste** for holes and pitting and two coats of **Resimetal 202 Ceramic Repair Fluid** for abrasion and erosion protection. This project was so successful that they had USI do several other filters shortly after the first one was completed.

Bavarian Inn, Frankenmuth, MI

Have a project you want us to look at? Call us at (248) 735-7000 and we will get one of local technical consultants to take a look at it.

USI Emergency Plug Pattie with Antifreeze

USI Emergency Plug Pattie (USI Premix) with antifreeze is primarily used to plug damaged gasoline and diesel fuel tank leaks. It is intended as a first response to control the amount spilled and minimize the clean-up.

The Premixed is ready for immediate use. No surface preparation is necessary. USI Plug Pattie (USI Premix) directly into and around the leak. Press down to get good adhesion. Additional USI Plug Pattie (USI Premix) can be added over the top. Will hold up to 2-3 feet of head. USI Plug Pattie (USI Premix) is a temporary plug. For a longer term patch, apply quick-cure epoxy over the top of the USI Plug Pattie (USI Premix). The USI Plug Pattie (USI Premix) seals off the liquid allowing the epoxy to cure.
