Eco-Friendly Hydrocarbon Spill Response with Peat Sorb

Hydrocarbon spills demand **rapid, reliable, and environmentally responsible** cleanup solutions. **Peat Sorb** is a 100% organic, biodegradable absorbent engineered to tackle oil, fuel, and other hydrocarbons—on land or water—while repelling water and locking in contaminants.

Lightweight and easy to deploy in remote or offshore locations, Peat Sorb can be applied directly to spills, absorbing hydrocarbons on contact. Once saturated, the hydrocarbons remain encapsulated, preventing recontamination and simplifying disposal. For well sites, refineries, pipelines, or marine environments, Peat Sorb is a **green solution that meets the industry's high safety and compliance standards** without compromising performance.

Peat Sorb can break down long chains in **PFAS** reducing movement in soil effectively capturing and stabilizing contamination.

It feels like summer is just kicking off, but believe it or not **winter is coming** and it's right around the corner.

Harsh winter conditions don't stop pipeline and facility maintenance needs—but they can limit your coating options. Protal 7125 is specifically formulated for **low-temperature applications down to -4°F**, making it the go-to choice for the oil & gas industry's winter coating season.

From **emergency repairs** to **planned maintenance**, now is the time to stock up and prepare your crews with coatings that perform when the temperatures drop.

Denso Protal 7125

Denso Protal 7125 is specifically formulated to be applied to colder substrates at colder ambient temperatures. It is a high build liquid coating that is brush or spray applied in one coat to many areas of in-service pipelines or during pipeline construction in the field. It cures fast to allow quick handling and backfilling, even down to -4°F.

Denso Densotherm Tape

Hot applied bituminous tape. It is comprised of a non-woven synthetic fabric fully impregnated and coated with a flexible, high melting point bitumen compound.

ViscoWrap ST

High-performance, amorphous, apolar, visco-elastic, semi-solid polyolefin coating crafted for effective corrosion prevention of both underground and aboveground substrates.

Resimac Chemical Resistant Coatings

We offer a full lineup of Resimac chemical resistant coatings and linings. If you have equipment or pipes affected by chemical attack reach out to USI today!
