

Kentucky Gas Utility Recommendation for Bore Wrap & Unconventional Solutions, INC.

Jason,

As expected, the Denso Wrap performed well in our first use of the product.

We ended up wrapping approximately x 200' of Dual-Coat pipe with the Denso Wrap due to a quick change of scope in the design of a high pressure install. The project quickly became difficult to open cut, so engineering and construction determined that Boring the pipe in would be the best option. We typically use PowerCrete coated pipe for all HDD's, but in this case the pipe was already delivered & onsite. Thus, we decided to wrap all the bored in sections with Denso Bore Wrap. The bore wrap did its job and came out of the bore in great shape. There is one section where we had installed both Bore-Wrap and Bore-Shield and the Denso Bore Wrap performed superior.

We appreciate all the help and quick delivery the USI team was able to deliver & want to share some pics from the project.

BIG Thanks!

Matt
